SOLID WOOD DOORS

Koetter

SOLID WOOD DOORS
Sustainable Design

For centuries, American hardwoods have been appreciated for their beauty, warmth, durability, and lasting value. Today’s consumers are adding “green” and “sustainable” to the reasons they choose floors, cabinets, and millwork made from domestic hardwoods. Sustainability is all about meeting today’s needs without compromising the needs for future generations.

Mirroring Natural Forces

In a hardwood forest, trees compete for the water and sunlight that come through the forest canopy. Koetter Woodworking carefully harvests individual trees, creating openings which allow more precipitation, sunlight and nutrients to reach the forest floor. This single-tree selection method of harvesting reduces competition and improves growing conditions. In practice for decades, this mirrors the natural process of single trees or small groups of trees perishing and falling on their own.

Our Commitment to the Future

For over 50 years, Koetter Woodworking has been committed to the sustainability of our industry’s timber base. We personally oversee every aspect of the harvest from our company timber grounds, as well as purchased standing timber, acknowledging BMP’s (Best Management Practices) and all recognized harvesting and silvicultural criteria.

In U.S. forests, we grow about twice as much hardwood as we harvest each year. What’s more, trees renew themselves on their own, and in great abundance! With far more hardwood growth than there is harvesting, American hardwoods are the definition of environmentally friendly, green, and sustainable – today and for generations to come.
When building a new home, the end of the project is typically where costs are cut and the doors and millwork, two of the most critical design elements, tend to be the first items considered when sacrifices are made. Koetter Woodworking wants to change that. We believe that choosing solid wood doors should be viewed as an investment – a value added feature that adds instant equity to your home. Who hasn’t walked into a historic home and said “Wow… look at the woodwork and doors!” Koetter Woodworking wants to bring back the time-honored tradition of quality and craftsmanship when it comes to selecting your doors.

Like fine furniture, choosing the right doors can dramatically affect the overall look and feel of your home. Every door Koetter Woodworking manufactures is carefully hand-crafted from some of the finest woods available. Each hand-assembled, furniture quality door features traditional stile and rail construction, providing lasting strength and durability, creating doors to last a lifetime.

Whatever architectural design your project calls for, Koetter Woodworking is sure to offer a door that expresses your personal style, adding that wow-factor to your home or project.

In addition to Wood Doors, Koetter Woodworking supplies a full line of Architectural Millwork and Stair Parts.
Please use the QR scanner on your smart phone or tablet to view any of our complete catalogs.
**STOCK DOORS**

Koetter Woodworking’s selection of stock Poplar doors features three classic designs – the 6-panel, 4-panel, and true divided lite.

Each hand assembled, solid wood door features traditional stile and rail construction providing lasting strength and durability.
Available in our stock offering, the KW6000, 6-panel Poplar door is ready for immediate shipment. These doors are available as slabs, or pre-hung on any of our standard jambs and ready for shipment in 3-production days.

This handcrafted Poplar doors features:

• Premium Solid Wood Construction
• Full 1” panel thickness
• 1-3/8” x 6’8”, including standard widths of 1’0” - 3’0”
• Bi-fold units are available in 2’0” - 6’0” widths, which include heavy duty hardware and routing for hinges
• Laminated single-face stiles, further enhances stability of the door
• Full width stiles and single stave panels provide a uniform color and grain pattern, adding to the overall visual appeal of the door
• Stiles are a full 4-3/8” wide, which will accommodate most any hardware
• Flexible rubber spacers around panels allow for normal expansion and contraction while keeping the panels centered and stable
• Doors are factory beveled on two edges, simplifying the hanging process
• Each door is individually inspected and hand-sanded after assembly, reducing field prep work for your finisher*
• Doors are individually wrapped in KW DuraGuard protective film before shipment, which keep doors clean and dry prior to finishing
Available in our stock offering, the KW4000, 4-panel Poplar door is ready for immediate shipment. These doors are available as slabs, or pre-hung on any of our standard jambs and ready for shipment in 3-production days.

This handcrafted Poplar doors features:

- Premium Solid Wood Construction
- Full 1" panel thickness
- 1-3/8" x 6’8”, including standard widths of 1’0" - 3’-0"
- Bi-fold units are available in 2’0" - 6’0" widths, which include heavy duty hardware and routing for hinges
- Laminated single-face stiles, further enhances stability of the door
- Full width stiles and single stave panels provide a uniform color and grain pattern, adding to the overall visual appeal of the door
- Stiles are a full 4-3/8" wide, which will accommodate most any hardware
- Flexible rubber spacers around panels allow for normal expansion and contraction while keeping the panels centered and stable
- Doors are factory beveled on two edges, simplifying the hanging process
- Each door is individually inspected and hand-sanded after assembly, reducing field prep work for your finisher*
- Doors are individually wrapped in KW DuraGuard protective film before shipment, which keep doors clean and dry prior to finishing
Available in our stock offering, the G15000, **15-lite Poplar** door is ready for immediate shipment. These doors are available as slabs, or pre-hung on any of our standard jambs and ready for shipment in 3-production days.

This handcrafted Poplar doors features:

- **Premium Solid Wood Construction**
- **1-3/8” x 6’8”, including standard widths of 1’0” - 3’0”**
- True divided lites feature 1/4” clear, tempered, compression-fit glass, resulting in reduced prep work prior to field finishing
- Each individual pane of glass is wrapped in protective film to protect against scratching during delivery, installation, and finishing
- Laminated single-face stiles, further enhances stability of the door
- Full width stiles provide a uniform color and grain pattern, adding to the overall visual appeal of the door
- Stiles are a full 4-3/8” wide, which will accommodate most any hardware

CUSTOM DOORS

On the following pages you will find an extraordinary selection of over 300 door styles, each categorized into one of 9 recognized architectural styles, to help simplify the selection process when choosing the perfect doors for your home or project.

Once you have selected your doors, choose from one of 13 standard species and an extensive selection of sticking, panel, and glass combinations. Add additional interest to your doors by incorporating one of 7 architectural applied mouldings, or when choosing a lited door, consider one of our many decorative glass options.

Whatever style of door you choose – from an understated Arts and Crafts design, to a Victorian style with decorative applied moulding, the design possibilities are endless. Your imagination is the only limitation!
A variation of Colonial architecture, the original Cape Cod was a one-storied home with shingled sides and a large center chimney. Over time, people added to the houses, either doubling the half cape or adding a wing to the rear. Dormers were cut into the roofs to add more space, light and ventilation.

The Cape Cod is symmetrical in appearance with a center door and formal, center-hall floor plan. Interiors are simple, featuring wide plank flooring, beaded wainscoting and beamed ceilings. Borrowing from the New England homes of the 17th century, this cottage style has consistently appealed to generations of Americans for its simplicity and charm and is one of the most recognized house styles in North America.
Originally inspired by the blustery weather conditions in the Massachusetts Cape Cod region, this popular home style continues to portray the feel of coziness and warmth.

Inspired by the houses of early settlers, colonial architecture expresses the American ideal of home. More than 300 years ago, the first Colonial homes were built by pioneering settlers on the eastern seaboard. Known for their symmetrical design and understated beauty, Colonial-style homes embrace a nostalgia for general, antebellum living.

Built before the era of industrialization, Colonial houses featured a characteristic “handmade” quality in elements such as doors, windows and brickwork. Architectural details in today’s Colonial home include wide-plank flooring, wainscoting, crown moulding, elegantly turned balusters for staircases, impressive fireplace mantels, box ceiling beams and pediments above windows and doors – elements that add dimension and welcoming interest to the home.
The contemporary home is typified by the simplification of form and the elimination of ornament – less is more. Conceived early in the 20th century, modern architecture was reaction against lavish stylistic excesses and driven by the availability of new building materials like iron, steel, concrete and glass and the new design flexibility found in the materials.

Interior spaces in a contemporary-designed home are open and airy, using a free arrangement of large windows to emphasize natural light. Floor plans are sparse and simple with minimalist architectural touches. From doors, to mantels, to staircases - the contemporary home is streamlined and asymmetric with clean lines throughout. This continues to the exterior of the home with the use of flat roofs and multiple rooflines. Overall, the industrial look and feel of the modern home is complemented by its ability to facilitate functional, clutter-free living.
Simplicity, subtle sophistication and clean lines are defining characteristics of contemporary interiors.

Craftsman Houses were primarily inspired by the work of two influential architects from southern California – brothers Charles Sumner Greene and Henry Mather Greene. The unpretentiousness and informality of this architecture has given rise to a number of essentials associated with the style.

Exposed rafters, beams, or rafter ends are common. Large porches with pedestal-like tapered columns create a welcoming first impression, while interiors feature simple, unadorned mouldings, wide-plank flooring, beamed ceilings, wainscoting, and built-in cabinetry. The simple functionality of the Craftsman style has made it a treasured favorite of many.
Unlike the ornate mouldings and doors that characterized the Victorian era, classical Craftsman style interiors feature more simplistic designs.
Also known as French Provincial, French Country architecture is all about mixing the formal with the informal, the old with the new. Home styles range from modest farmhouse designs to estate-like chateaus, exuding a variety of Old World influences featuring brick, stone or stucco exteriors, steeply hipped rooflines at varying heights, tall thin widows and curved dormers.

Arched openings, wood beams, and accents of iron and stone grace the interiors, offering a casual charm and understated elegance that is completely unique.
Arched elements in doors and windows are common features of French Country design.

**ARCH TOP DOORS**
Incorporating the eclectic styles of Mission and Spanish Revival architecture, Southwestern designed homes combine natural elements of wood, stone and tile, creating a warm, comfortable, and relaxed environment. Southwestern homes feature smooth, stucco asymmetrical exteriors, tile roofs, beamed ceilings as well as arched windows and doors.

While the earlier Mission Revival style is quite simple, Spanish Revival architecture is more ornate with intricately patterned tile, applied relief ornamentation, and wrought iron grillwork. Southwestern architecture is popular in warm, tropical settings however, it is a welcome design wherever homeowners want to enjoy the warmth of this ethnically-eclectic style.

Towards the end of the nineteenth century, European-trained architects, brought the eclectic Tudor style to America. Based on English homes that were built near the end of the medieval period, the style is named for the Tudor family, which ruled England during that time. The exterior of a modern-day Tudor style home features false half-timbered stucco, duplicating the look of the original building technique which was an integral part of the home’s structure.

Other features include beautifully patterned brick or stonework, cross-gabled, steeply pitched roofs, and tall, narrow windows. Fine craftsmanship is a prized characteristic of the Tudor interior, defined by arched doors, wainscot paneling, decorative mantles, beamed ceilings and millwork with ornamental detailing, providing a sense of history and elegance.
The Tuscan style of architecture originated in England in the 1840s. Prior to that time, English homes were more formal and classical in appearance. With the picturesque movement, builders began designing elegant recreations of Italian villas. By the late 1860s, the Tuscan style house was one of the most preferred architectural styles for homes in the U.S. and it has maintained its popularity to this day.

The appeal lies in the simplicity of design. Typically featuring an open floor plan and a mixture of Old World and Mediterranean styles, homes decorated in the Tuscan style are inspired by the elements of nature. Today’s Tuscan home is characterized by wide-plank flooring and wooden beams, along with arched windows and doorways. Accents of wrought iron, stone and tile are also typical features of Tuscan style architecture.

The Victorian style of American architecture spanned from about 1860-1900. During that period, builders and architects developed several variations of overlapping architectural styles, with Gothic and Queen Anne being the most predominant. Traditional Victorian rooms featured tall ceilings which called for larger mouldings, often combined with decorative blocks.

Today’s Victorian home represents this same ornate and grand design with distinctive architectural elements like asymmetrical facades, steep gabled roofs, wrap-around porches, and other fanciful details such as decorative brackets and spindle work. Interiors feature fireplaces with heavy mantels, elaborate moulding combinations and doors with applied mouldings and pediments. The Victorian is rich with history and allows for a variety of distinctive and elegant touches.

2 - PANEL

KV Series – Features our 241 Vee Groove Panel
KP Series – Features our ½" tongue and vee planks (plank width varies based on door style)
Our louvered doors are manufactured with a unique raised panel louver design, where the louvers are set into a raised panel frame, which is then set into the stiles. Unlike traditional louver door construction, there is no end-play, which provides stability and eliminates rattles. As with our standard raised panel doors, surgical rubber spacers are used around the panels to allow for expansion and contraction.

Perhaps, most importantly, this method of construction offers you the ability to match your louvered door sticking and panel raise to your paneled doors, maintaining a consistent design throughout your project.

Louver doors feature our standard 241 panel raise. If desired, any other panel that is 1” or thicker may be substituted.

Add a unique design element to your Koetter Woodworking hardwood doors by choosing from our wide selection of applied moulding options.

Most mouldings can be modified to fit based on your individual door style and rail/panel selection (some limitations apply.) For illustration purposes, all applied mouldings are shown in combination with 1-3/8” rails and the 241 panel. Actual moulding size may vary based on your particular panel and rail selection.

Door size, style, as well as rail and panel selection must be specified when ordering doors with applied mouldings.

Ex: 1-3/8” x 3’0” x 6’8” KW2200, D11-241 with C-ADM applied moulding.
When your project calls for paint grade doors, rely on the quality and craftsmanship found in Signature Prime™ doors from Koetter Woodworking.

Poplar stiles and rails combined with MDF panels are the perfect combination. Koetter Signature Prime™ doors feature face laminated, solid Poplar stiles and rails, providing superior screw holding power and reduced hinge wear over the life of the door. Since wood moves with the grain, the greatest expansion and contraction occurs in the widest components – the panels. MDF does not have grain memory, so it expands and contracts equal amounts in width and length, providing greater stability and uniform structural support.

The detailing in a Koetter Signature Prime™ door is visibly evident. Profiles are precision machined with diamond and carbide tooling, providing crisp, well-defined profile features. Each door is primed by hand with a high-solid content primer which provides more thorough coverage, while maintaining the precise detail of the profile.
Koetter Woodworking offers an unmatched selection of fire rated stile and rail doors, engineered to match our extensive offering of non-rated doors. Choose from numerous panel and rail options in one of nine highly recognized architectural styles. Doors are available as slabs or pre-hung units in accompanying fire rated wood jambs.

Please visit our web site at www.koetterwoodworking.com to view some of the most frequently asked questions regarding Koetter Brand Certified fire rated doors and jambs.

Drawings shown above feature Transom Sash construction. One lite transoms may also be ordered as Direct Set Transoms (shown bottom right). Please specify when ordering.

**Transom Sash**

Constructed using the same methods as our standard style and rail, true divided lite doors.

The standard face rail width on a transom sash is 1 3/4".

When ordering a transom sash, please provide us with the dimension of the sash itself, not including the jambs.

**Direct Set Transom**

Direct Set Transoms are constructed by "double stopping" the glass directly on to the jambs. This option is only available with one lite transom designs.

When ordering direct set transoms, it is important to specify whether dimensions given are "inside to inside" or "outside to outside" of the frame.

Our furniture quality doors are hand-crafted from some of the finest woods available. Whether you have chosen a simple two-panel Arts and Crafts design or a radius top door featured in the Tuscan collection, our selection of thirteen standard species, will give you the ability to create a door that is truly distinct. Additional species are available upon request. Contact your account representative if your project requires a specie not featured in our standard offering.

Profiles are precision machined with diamond and carbide tooling, resulting in well-defined detailing.

Solid wood panel construction provides crisp, detailed edges unlike veneer wrapped panels.

Free floating panels with flexible rubber spacers allow the panels to stay centered during normal expansion and contraction.

5/8" x 4" solid wood dowels are used at every stile and rail joint providing added strength and stability.

Solid wood, stiles and rails are manufactured from hand-selected lumber, and are face laminated to enhance the stability of the door. No veneers or finger-jointed stave cores are used in the construction of our doors.

Photography does not represent all of the natural variation in grain and color that will occur in the production of a complete door package.

*Hickory is subject to availability in certain styles and sizes. Engineered panels may be substituted for solid Hickory panels at Koetter Woodworking’s discretion.

**Stiles may be edge glued.

Our furniture quality doors are hand-crafted from some of the finest woods available. Whether you have chosen a simple two-panel Arts and Crafts design or a radius top door featured in the Tuscan collection, our selection of thirteen standard species, will give you the ability to create a door that is truly distinct. Additional species are available upon request. Contact your account representative if your project requires a specie not featured in our standard offering.
• All doors manufactured by Koetter Woodworking, Inc. are individually shrink-wrapped, with some exceptions, for protection against moisture and dirt. Doors can be pre-hung with the shrink-wrap still intact until they are delivered to the job site and are ready for finishing.

• Koetter Woodworking doors are available as slabs or as pre-hung units. We can hang doors on a variety of jamb widths, and we have a large selection of hinge styles and finishes to choose from.

• Koetter Woodworking stock, paneled doors are pre-beveled 3° on both edges to allow for ease of hanging.

• Job-lot quantities of pre-hung doors up to 8’0” tall are shipped vertically on steel skids. These skids can be forklifted off at your facility where you can then ship them directly to your job site. This reduces the chances of doors becoming damaged during shipment, as well as providing an easy method of loading and unloading large quantities of doors. Any door units wider than 3½” and all double hung units will be machined and pre-assembled but shipped knocked down.

• Pre-hung units over 8’0” tall are shipped on horizontal wood pallets.

• All steel skids remain the property of Koetter Woodworking Inc. and must be returned within 30 days.

• All raised panel doors are manufactured using solid wood construction – no veneers.

• All panels are free-floating with rubber spacers between the panels and the rails, which allows the panels to expand and contract as the humidity levels change.

• Koetter Woodworking can manufacture doors to meet almost any specification or design. If you don’t see it in our catalog, just send us a picture of what you are looking for, and we will do our best to match it.

• Koetter Woodworking, Inc. guarantees its doors to be of good material and workmanship and to be free from manufacturing defects at the time of shipment. Detailed information on Koetter Woodworking’s Limited Lifetime Warranty can be accessed on our web site at www.koetterwoodworking.com.
HOW TO ORDER YOUR KOETTER WOODWORKING DOORS

STEP 1  Determine your door style by choosing from our selection of stock Poplar doors or from one of over 300 custom door designs.

STEP 2  Determine the quantity, thickness, width and height of your doors.

STEP 3  If you have selected a custom door style, choose our collection of 13 standard species shown on page 56. If your doors will be painted, consider one of our MDF panel options.

STEP 4  If your door is custom, select a rail and panel (or glass) combination. To simplify the selection process, we have grouped the rail and panel/glass options together based on the groove size in the rail.

STEP 5  Are your doors pre-hung? Choose the appropriate jamb width including the specie. List the swing for each door along with bore specifications (standard bore, no bore, etc.). Choose your hinge size and finish and select any additional hardware needed such as ball catches, flush bolts, or t-astragal.

TIPS
• Always group “like doors” (by style, thickness and height) together on your order.
• Start with the narrowest width, working up to the widest. List your double doors at the end.
• When ordering double doors, note the width of the opening and base your quantity ordered by the opening width.
Ex: If you have two openings that are 5’0” wide, requiring double doors, you would order “2 – 5’0” doubles” which would consist of 4 doors.

HERE IS AN EXAMPLE OF THE MOST EFFECTIVE WAY TO WRITE UP A KOETTER WOODWORKING DOOR ORDER:

6’8” doors are grouped together

1-3/8” x 6’8” KW5000, B11/241 White Oak doors, pre-hung on 4-9/16” White Oak jambs, RC3.5-US10B oil rubbed bronze hinges, standard bore

Group by smallest to largest size listing, double doors at the end.

1 – 1’6” RH
2 – 2’0” 1/RH, 1/LH
4 – 2’4” 1/RH, 2/LH, 1 Slab
3 – 2’6” 2/RH, 1/LH
1 – 2’6” RH on 6-9/16” White Oak jamb
1 – 3’0” RH
1 – 4’0” double w/ oil rubbed bronze ball catches, no bore
1 – 5’0” double w/ t-astragal, oil rubbed bronze head and foot bolt, RH active, standard bore

8’0” doors are grouped together

1-3/8” x 8’0” KW5000, B11/241 White Oak doors, pre-hung on 4-9/16” White Oak jambs, RC3.5-US10B oil rubbed bronze hinges, standard bore

4 – 2’4” 3/R, 1/L
2 – 2’6” R
2 – 5’0” doubles w/ HDW BC-US10B oil rubbed bronze ball catches, no bore
1 – 1 3/8” x 4’0” x 6’8” double, G04112, B1G, B11/241 w/ ¼” clear tempered glass, t-astragal, HDW FB-US10B oil rubbed bronze head & foot bolt, RH active, standard bore

Since this door unit is a different style from the others, it has been listed at the end.
When selecting doors for your home or project, keep in mind that the interpretation of architectural styles can be somewhat subjective. The information we have provided focuses on the common features and elements found in various periods of American architecture.

The following resources were used to compile much of the information featured in this catalog, as it relates to the various architectural styles:

Antique Home. www.antiquehome.org

The Hardwood Council. www.americanhardwoods.org
